

User Notes

Planner Notes

1. task-details-modal
 - a. Assignments
 - i. Assignment mechanic for tasks should allow for the assignment of:
 1. Members: Each participant of a move can be assigned a task
 2. Owners: Any Owner that's been created can be assigned to a task
 3. Spaces: Rooms can be assigned to a task
 - ii. Assignments are not exclusive and any combination of the 3 assignees can be assigned to a single task
2. Task Cards (Task List & Timeline)
 - a. When empty space within a Task Card is clicked/tapped, the details modal should display allowing the user to make edits to the tasks.
3. Frame Headers
 - a. Same functionality for the empty space on Frame Headers (which opens the FrameHeaderModal) as there is with Task Cards. Also, the Frame Title and sub-title should allow for editing if the user taps directly on the text of either.
4. Add Tasks
 - a. When a user adds a task (either to the Task List or the Timeline), the Task Details modal should display, allowing the user to create a new Task properly, instead of just adding an empty card to the Task List/Frame.
5. Add Frame
 - a. The right most spot on the Timeline should be always be an Add Frame button (reuse of the Add Task button is sufficient. When a new Frame is created, there should be a FrameHeaderModal displayed which allows the user to create the Frame title, sub-title, and color.
6. Task List

Task Card with assignments. Upper-right is the Member avatar. The bottom-right is the Spaces icon, and above that is the Owners icon. When assigned the Owner and Spaces icon should be colored with the corresponding color (for the owner or communal room assigned).

- a. The Task List should have a button at the top of it that allows the user to collapse >< and expand <> the list, providing additional space to view and modify the tasks within the Timeline.

Dashboard

1. The Dashboard needs a complete design and functionality overhaul. The Dashboard should be an overview of all the data within the app. It should be designed to give insight on the most important information from each feature
 - a. Box packing progress: a stacked area chart at the top displaying the overall, as well as individual, progress being made with packing.
 - b. A stacked progress bar beneath the area chart, showing the statuses of all the boxes that are currently in the database (overall and individual options)
 - c. A dynamic bento grid of cards displaying the Spaces and how many boxes each space has. The

card sizes are dynamically changing based on the number of boxes in each space. The more boxes, the larger the card.

- d. If the inventory has been, or is being, loaded into the truck, an overview of the Truck Layout, displaying the number of boxes in each zone, as well as who they belong to (based on Owner color) is shown as well.
- e. The dashboard budget should provide an overview of expenses utilizing a

Overall Design Notes

- 1. App needs an overhaul in regards to a responsive/mobile-first design foundation.
 - a. Bottom Nav bar needs to be changed. There needs to be 5 overall buttons, the middle should be the scanner button as it is. The other 4 need to be UI design appropriate buttons that utilize a categorical top level button in which the sub level buttons are the routes to the numerous features/pages of the app.
